Change of Navigation Database Supplier for FMS SCN 601.X/701.X through 800.X/900.X

To: FMS Operators

Subject: Change of Data Supplier for Navigation Database Updates Application

This Service Letter applies to all Universal Avionics (UA) Flight Management System (FMS) Software Control Numbers (SCN) 601.X/701.X through 800.X/900.X.

Description

UA is informing you of an upcoming change to the current FMS Navigation Database supplier. Effective with the Cycle 2207 dated 14 July 2022, the primary data source for UA's Navigation Databases will switch from Jeppesen to Lufthansa Systems' Lido Data Services.

There are no associated price changes, and no action is required on your part. Customers using databases of 802.X/902.X or higher were previously switched to Lufthansa Systems in 3rd quarter 2021.

A minor part number change will be noticeable to support the transition. The "S" or "-ZIP" in the current part number will be removed. Users with a Solid State or Portable Solid State DTU will need to manually create a folder named "uasc" to extract and store the database file.

UA's decision to switch the provider of the FMS Navigation Database comes after an extensive period of careful review. Overall, any changes/differences should be transparent to the user. Some subtle differences such as differing waypoint conventions and minor nuances on leg procedures may be noticed.

UA error reporting and customer notification processes will remain unchanged. The FMS Navigation Database process is approved to FAA AC20-153A and is compliant with RTCA/DO-200A.

This switch enables UA to continue to provide industry leading support as the company's product portfolio offering expands through the InSight™ Display System, ClearVision™ Enhanced Flight Vision System (EFVS), Interactive Flight Management System (i-FMS), and more.

Lufthansa Systems offers a mature product with database information on more than 24,000 airports, 100,000 airway segments, and 200,000 waypoints. It meets the highest standards in currency, precision, and data integrity.
