

i-SVS

INTERACTIVE SYNTHETIC VISION SYSTEM

Head-Up, Head Down Solution for Enhanced Safety in Degraded Visual Environments.

- Displays FMS information super-positioned on the real world, allowing for a better understanding of navigation data.
- Provides an enhanced, more intuitive user interface – look, point, and click.
- Reduces workload in critical flight phases by allowing the operator to program the FMS looking out the window while flying the aircraft.
- Offers the first step to support single pilot operation.
- Presents a wearable HUD to the retrofit market.

Latest, State of the Art Display System [Visit the website](#)

- Large format high-resolution LCD displays
- Pilot-selectable screen layouts
- Graphical user interface
- Cutting-edge Synthetic Vision System (SVS)
- Advanced radio control (with compatible radios)

Complete HWD/HMD and EFVS Solution [View PDF](#)

- Highly integrated solution
